eBulk Uni Pro – The revolutionary new background screening tool for universities

Our UniPro solution was created by demand following the actions of a well-respected UK University that went to the market looking for a better solution to support their Safeguarding and DBS requirements.

CBS specialise in creating inexpensive industry-specific solutions. We relished the opportunity to create a purpose-built solution for a university that wanted to be at the forefront of a modern robust safeguarding solution.

This bespoke solution was created to remove the administrative burdens faced by Student & Staff Administrators. It has significantly changed the way Universities work to manage their safeguarding needs by ensuring the automation of processes, standardising the way of working, and creating consistent confidence in determining the suitability of students to work with the most vulnerable in society.

“When tendering for a University contract in 2020, we quickly identified that these organisations had very specific requirements embedded into their safeguarding processes, that were not being managed by typical ‘off the shelf’ DBS solutions...We set out to create a bespoke solution that specifically focused on automating much of the daily tasks, as well as introducing new safeguarding features that enhanced the user experience and the level of resources required to support the overall system.” - Rachel Bedgood, CEO.
